<i>Figures</i>	IX
<i>Introduction</i>	XI
1 Thinking about how remedies are selected	1
Introduction — More about cause and cure - What is the 'simillimum'? - How are remedies selected? - Constitutional aspects of pathological prescribing — The 'pathological simillimum' — Constitutional prescribing — What is a repertory? — Repertorization of thermal sensitivity — The materia medica — What are leading symptoms? - Prescription by causation - Using a therapeutic index, repertory and materia medica - What is a miasm? - What is 'Hering's Law'? — Potencies and frequency of repetition — What is a 'similior'?	
2 Thinking about how remedies are made	24
Introduction — Pharmaceutical objectives — Scales of serial dilution - Manufacture of LMs — Mother tinctures — Diluents — Impurities - Types of energization - Classical energization: succussion — Classical energization: trituration — Fluxion — Bubbling and prepotentization — Electromagnetic energization — Boiling — Erasure of imprinting - Preparatory vessels - Medication of solid forms.	
3 Thinking about how remedies work	72
Introduction	73
Part One	
Receptor-mediated action of remedies (Type I action)	77
Pharmacodynamic docking and locking — Agonism versus antagonism — Physicochemical concepts in agonism and antagonism	

- Van der Waals' forces and the Casimir effect - Summation of geometric conformation - Substitution with the field concept - Remedies as fields - Homeopathic blocking or shielding - Allergenic isopathy — Viral remedies (viral nosodes) — Homeopathic blocking of therapeutic drugs — Homeopathic action of material doses of drugs — Duration of action of potentized remedies - Explanation of the actions of *Arnica* and *Euphrasia* — Explanation of the actions of *Mercurius* and *Arsenicum*.

Part Two

Non-receptor-mediated action of remedies

(Type II action)

93

Fundamental ideas - Further concepts of disease — Geometric concepts - Multiple subsets in chronic disease - Intermediate states — Electromagnetic radiation remedies — Conclusion.

4 Thinking about dosage and related matters

103

Introduction - Mother tinctures - Liquid potencies - Dosage of liquid and solid forms — Triturated material — Potency and therapeutic response — Dose repetition — Storage of solid forms — Precautions in taking remedies - Adverse effects of potentized remedies - Administration of remedies to breastfed babies - Complex prescriptions - Placebos.
