<i>Preface</i>	
<p>Lesson 1</p> <p>Finding the Symptoms - Recognising Individuality and Susceptibility</p> <p>Differentiating between presenting and prescribing symptoms. Defining types of symptoms. To demonstrate the shift in symptoms over time. To demonstrate the symptoms that build up into a case, using three cases.</p> <p>Basic Skills The Order of Sections in the Repertory with exercises on finding symptoms in the repertory.</p>	<p>13</p>
<p>Lesson 2</p> <p>Exciting and Maintaining Causes and the Total Symptom Picture</p> <p>To identify exciting and maintaining causes and the symptoms that arise from these, How do they relate to the Total Symptom Picture of the constitutional case? Two cases are used to illustrate with exercises to work on.</p> <p>Basic Skills More Repertory Work Converting Symptoms into Rubrics Tackling the language of the Repertory with exercises.</p>	<p>27</p>
<p>Lesson 3</p> <p>Looking for an Essence</p> <p>Building a list of symptoms into a totality, a pattern of symptoms that makes a case. Differentiating keynotes, characteristics and the nature of the vital force. How to see the essential quality of a case in the language used, the process of degeneration of the miasm, and the tonal quality of the symptoms. Three cases to work on.</p> <p>Basic Skills Repertorising a Case The basic process of putting prescribing symptoms into a hierarchy, finding rubrics then the process of elimination. 5 small cases to work on.</p>	<p>43</p>
<p>Lesson 4</p> <p>Homoeopathic Chronic Disease</p> <p>Definition of the homoeopathic theory of chronic disease and distinction as to how this term is used in orthodox western medicine. How the characteristics of chronic disease affect the expression of symptoms and explain the change in symptoms, i.e. the dynamic process of chronic disease. The miasm as fundamental cause. Miasmatic degeneration responsible for the manifestation of the pattern of symptoms at any one stage. Using one case to bring together theory from all previous lessons.</p> <p>Basic Skills Using Individuality and Susceptibility in Repertorising With 5 cases to work on.</p>	<p>53</p>

Lesson 5	The Degeneration of the Miasm, the Disease Process and the Timeline	63
	<p>How the manifestation of the miasm changes through a lifetime. The meaning of changes in location, mode of defense mechanism and symptom picture. What do we mean when a case moves deeper? Using a timeline to illustrate the point of change and what symptoms change. Two cases to illustrate theory, with exercises to help understanding.</p> <p>Basic Skills Individuality, Susceptibility and Core Symptoms</p> <p>Identifying what remains of the constitutional remedy through the disease expression With three cases to work on with detailed explanation in one.</p>	
Lesson 6	How Family Patterns Show the Degeneration (or Internalisation) of the Miasm	77
	<p>Uses three families, one of three generations, to show how these express stages of the miasm. With each subsequent child the symptom picture will change but the miasm can be recognised and traced through the core symptoms, the different locations and the defense mechanism used on the disease process. These complex changes are illustrated in the use of a table of comparison. Also contains material on the shift between the tubercular and cancer miasm.</p> <p>Basic Skills Case Taking</p> <p style="padding-left: 40px;">Establishing the value of symptoms and the pattern of symptoms plus the means of acquiring information.</p>	
Lesson 7	Choosing a Potency	91
	<p>On what criteria is this selection based? Relating potency selection to the speed of change of the symptoms and their level of manifestation, and the defense mechanism used by the Vital Force. - i.e. indicators of the vitality of the vital force and the degree of chronicity. Using three cases to illustrate.</p> <p>Basic Skills Observation 1</p> <p style="padding-left: 40px;">How to go about observation, step one, recognising impressions with its mass of potential information. With a questionnaire to help separate from mere description</p>	
Lesson 8	The Miasm and the Use of the Nosode	101
	<p>Nosodes in terms of resonance patterns and the energy level of the Vital Force. What guidelines can we establish? Why is the use of the nosode different from that of other remedies? Review of two cases already studied then further study of 3 cases to show different situations in which a nosode can be used.</p> <p>Basic Skills Tracking the patient</p> <p style="padding-left: 40px;">How can we be with the patient during the interview, getting information without influencing it. In other words, if we cannot be truly objective, how can we interact? 'Tracking is done unconsciously and naturally by the good conversationalist'.</p>	

Lesson 9	Assessing the Action of the Remedy	115
	To understand the change in a symptom picture after giving a remedy. What symptoms have changed and how have they changed. And what does change mean. By what criteria can we evaluate change in the symptom picture. Review of 5 cases already studied.	
	Basic Skills Observation 2	
	Synopsis of body types in the work of Stanley Keleman. How can these be used in Homoeopathy so the evidence of a physical nature informs us of the underlying motivation and experience?	
 Lesson 10	 When the Remedy Changes	 127
	How do we evaluate change in the symptom picture. Consider different criteria including the acute after treatment, interfering causes of an exciting or maintaining nature, and evidence of retrogressive change in the expression of the miasm. Three cases are used to demonstrate different types of change	
	Basic Skills Language 1	
	The physical aspects of making sound as related to the repertory. And of course, more repertory exercises.	
 Lesson 11	 Using Repeat Doses in Long Term Management	 139
	The concept of the Single Dose. The effect of repeat doses on the Vital Force. The use of Cell Salts and LM potencies. Why would we want to repeat the dose? Two cases illustrate this Lesson's theory.	
	Basic Skills Language 2	
	What does the language we use tell us of the mental and emotional processes and the essence of the remedy?	
 Lesson 12	 Treating Acute Illness	 149
	Different types of acute and how these arise form the constitutional symptom picture. How do we recognise these different types of acute and hence choose an appropriate potency and management strategy for the case? Case examples.	
	Basic Skills Life Strategies or Belief Structures.	
	Putting it all together to show the relationship between Essence, language and manifestation of disease.	
	 Appendix 1 Some Answers	 161
	Appendix 2 C.M.Boger on Symptoms	181
	Index	183
